

Heroturfs Ads Dashboard

Technical Design Document – Google Ads API Integration Request

Date: 2026-05-10 · Owner: ROLS Carpets / Heroturfs · Contact: Fernando Ferrández (fernando@rolscarpets.com)

1. Executive Summary

Internal analytics dashboard built for ROLS Carpets / Heroturfs to read Google Ads campaign performance data and combine it with Meta Ads and HubSpot CRM data into a unified marketing view. The tool is read-only, used internally by approximately 5 employees (marketing team and management), and hosted locally on internal machines. It is not publicly accessible.

2. System Architecture

- **Backend:** Python 3 + Flask web framework
- **Database:** SQLite (local file, used as cache only)
- **Frontend:** HTML + Vanilla JavaScript + Chart.js for visualizations
- **Data sources integrated:** Meta Marketing API (already), HubSpot CRM API (already), Google Ads API (subject of this request)
- **Source code:** private GitHub repository (github.com/ROLSCARPETS/ads-heroturfs)

3. Data Flow

The system follows a standard ETL pattern: extract data from each API, transform and aggregate, and load into the local SQLite cache. The dashboard reads from SQLite, never directly from APIs at request time. A manual refresh button in the UI triggers a sync, and daily automated syncs are planned via Windows Task Scheduler. **All API interactions are READ ONLY** — no data is written back to Google Ads, Meta or HubSpot.

4. Google Ads API Usage

Endpoint	GoogleAdsService.SearchStream (read-only GAQL queries)
Data extracted	Campaigns metadata, ad groups, daily insights (impressions, clicks, cost_micros, conversions, conversion_value, ctr, cpc, cpm)
Login customer (MCC)	561-179-0021
Operating customer (Heroturfs)	308-486-6445
Authentication	OAuth 2.0 with refresh token + Developer Token (Basic Access)
Estimated daily ops	100-500 (1 daily sync × ~22 campaigns × ~30 days incremental). Well below the 15,000 ops/day Basic Access limit.

5. Security and Privacy

- All credentials (Developer Token, OAuth Client Secret, Refresh Token) stored in a local .env file, excluded from version control via .gitignore.
- No customer PII is exported from Google Ads beyond what is already in our control.
- The dashboard is hosted on localhost (127.0.0.1:5001), accessible only on the internal LAN.
- Source code is in a private GitHub repository (no public exposure).
- All API calls are read-only. We do not modify campaigns, budgets, or any Google Ads object.

- No data is shared with third parties or external services.

6. User Interface

The dashboard has the following main sections:

- KPI cards: spend, leads, CPL, CTR, CPC, ROAS, CAC by selected country and date range
- Evolution chart: daily / weekly / monthly time series of spend vs leads
- Campaign performance table with filters by country and status
- HubSpot CRM section: conversion funnel, revenue attribution, deals by stage
- Weekly summary table (Excel-style) combining all 3 sources for at-a-glance review
